4/23/04: Amd for Ser. No. 10/065,140 - Inventor(s): Leen-Peter de Jong - Filing Date: 9/20/2002

## REPLACEMENT PARAGRAPH 0028

[0028] In contrast to this, when articles are to be placed onto the central depth position B or the rearmost depth position C, the articles are always positioned on the longitudinally movable carriage 2 and not on the stationary support 1. For realizing the movability of the carriage 2, it can be provided, for example, with rollers R (Fig. 2) for moving it on the stationary support 1. In the alternative, it is also possible to guide the carriage 2 on a separate guide path. Advantageously locking means are provided with which the carriage 2 can be easily secured or locked in both end positions. This locking action can be released against a minimal resistance.
